

Avazzia Devices

Avazzia BEST™ devices are Micro-current, Biofeedback, Electro-Stimulation Devices cleared by the FDA for use transcutaneously for relief of pain. The products are hand-held, battery-powered devices that apply relaxation-stimulation pulses and are effective, portable, and economic solutions to address the healthcare concerns of today's active population.

BEST Innovation

BEST technology, developed by Avazzia's CEO Tim Smith, produces micro-current electrical impulses, which are transmitted by electrodes in the device through the skin to communicate with the body's nervous system. BEST products are controlled by a high-performance microcomputer chip, which uses Avazzia proprietary software

These hand-held devices are FDA-cleared for the symptomatic relief and management of chronic, intractable pain and adjunctive treatment in the management of post-surgical and post-traumatic pain (available by prescription only). These noninvasive neuro-stimulation devices allow patients to take control of their pain management.

Avazzia BEST products feature biofeedback, making them superior to traditional TENS units. BEST products work on different neural paths than a traditional TENS.

Healthcare providers – including physicians, dentists, chiropractors, physical therapists and athletic trainers – use these devices for their own pain management and as well as with their patients.

3 week lead time on all Avazzia device orders.
